

Argyn Technologies

FIRST TERM EXAM QUESTION PAPER

- 1.What is different between microcontroller and microprocessor
2. What is different between TRIS and PORT register
- 3.what is Register in microcontroller
- 4.write LED blink program with 5 second time interval
- 5.what is different between while loop and do while loop
- 6.what is resistor and explain resistor colour coding
- 7.Explain voltage divider circuit using resistor
- 8.what is the current and voltage output if resistor connect in series and parallel
- 9.what is current and voltage
- 10 explain ohms law and Kirchhoff current and voltage law
- 11.what is different between PULL UP and PULL DOWN resistor
- 12.Number conversion(i will give question at on time):
 - 1.Decimal to binary and binary to Decimal
 - 2.Decimal to hexadecimal and hexadecimal to Decimal
- 13.what is PORT and set given bit as output and input (i will give question at on time)
- 14.what is different between if else condition and switch case
- 15.How to Enable and Disable Internal pull up resistor
- 16.what is Function and function prototype
- 17.what are the type of function declaration
- 18.what is the Array and Index value
- 19.what is RUN time Array and Compile Time Array and store some string value to array and get one character from that string using index value(i will give question at on time)

20. what is for loop and different between for loop and while loop
21. Explain LCD pin diagram
22. How to send Command to LCD (explain inside of `lcd_command` function steps)
23. How to send DATA to LCD (explain inside of `lcd_data` function steps)
24. How to CLEAR one bit without changing remaining bits in the PORT
25. How to SET one bit without changing remaining bits in the PORT
26. what is bitwise operator and shift operator (i will give question at on time)
27. explain Truth table and diagram of AND gate ,OR gate ,NOT gate, XOR gate, NOR gate, NAND gate
28. what is the Diode and what is the application of Diode
29. what is the forward and reverse bias in Diode
30. what is Transistor ,what are the type of Transistor and explain that operation and diagram
31. what is different between byte and bit, how much data value store in 8 bit and 10 bit variable
32. what is DATATYPE and explain type of datatype in c program, and their byte value
33. what is PWM and give 3 real time industrial application example of PWM
34. what is different between Time period and Duty cycle
35. Explain units of TIME and units Frequency and how to find time using frequency
36. What are the registers using in pwm
37. Explain formula find duty cycle and Time period
38. What is timer and how much timers in pic16f877a and how that timer using in pwm function
39. What is ADC and give the 3 real time applications example
40. Explain SAR operation(This is one of the method using convert analog signal to Digital)
41. What is ADC resolution and how it's impact accuracy of ADC output
42. What are the type of register using in ADC
43. What is different between Left justify and Right justify in ADC

- 44.How to store 10 bit PWM duty cycle value in register
- 45.What is Program counter and working of program counter
- 46.What is bus and what are the type of bus in microcontroller
- 47.We connect temperature sensor to ADC pin and assume that sensor give 3 volt to adc so what is Digital value we get ? and calibrate that digital value to 0 to 100.
- 48.What is GO_DONE bit what is the use of that bit in ADC
- 49.Give the 5 best Embedded company Names and their Embedded product and application of that product
- 50.what is IOT(Internet Of Things) and explain working principle of ATM machine and Traffic light and washing machine and how to you program these .

ALL THE BEST
